1. XOR a string with a Zero

AIM: Write a C program that contains a string (char pointer) with a value 'Hello World'. The program should XOR each character in this string with 0 and display the result.

PROGRAM:

```
#include<stdlib.h>
main()
{
    char str[]="Hello World"; char
    str1[11];
    int i,len;
    len=strlen(str);
    for(i=0;i<len;i++)
    {
        str1[i]=str[i]^0;
        printf("%c",str1[i]);
    }
    printf("\n");
}
```

Output: Hello

World Hello

World

2. XOR a string with a 127

AIM: Write a C program that contains a string (char pointer) with a value 'Hello World'. The program should AND or and XOR each character in this string with 127 and display the result.

PROGRAM:

```
#include <stdio.h>
#include<stdlib.h>
void main()
{
    char str[]="Hello World";
    char str1[11];
    char str2[11]=str[];
    int i,len;
    len = strlen(str);
    for(i=0;i<len;i++)
    {
        str1[i]=str[i]& 127;
        printf("%c",str1[i]);
    }
    printf("\n");
    for(i=0;i<len;i++)
    {
        str3[i]=str2[i]^127;
        printf("%c",str3[i]);
    }
    printf("\n");
}
```

Output:

Hello World

Hello World

Hello World

3. Encryption & Decryption using Cipher Algorithms

AIM: Write a Java program to perform encryption and decryption using the following algorithms:
