21	C21	MIP-C21	217Y1A05G6	L.Roshan Kumar	Mrs. T. Sravanthi	SIH 1759- DYNAMIC MAIL TRANSMISSION SOLUTION USING BEST CONNECTIVITY ACROSS MODES "Serving a large country like India with the habitations across states, cities, towns, blocks and villages with geographic diversity as well is a complex task. The availability of multiple modes of transport for secure transmission of mail, parcels, cargo and people is a boon. Postal mail with its volume, value and weight profile has unique requirements for efficient and effective transmission to cover all delivery points around the sorting and transmission hubs that have been created over the years. With a focus on dynamic allocation and use of available transport within the structure of mail operations defined by the Department of Posts, we need a system to help choose the best mode across land, rail, air and water for fastest transmission

24	C24	MIP-C24	217Y1A05H1	I. Sannithreddy	Mrs. Aruna Rama	(SIH1758) AI-Powered Delivery Post Office Identification System “ The wide, evolving delivery network of the Post Office makes it difficult for customers to write the correct pin code on the postal items for delivery. The Post Office also merges Pincodes together to mechanise and streamline delivery in the emerging volume and mix of mail handled at different stages, including the point of delivery. An intelligent solution, powered by AI is needed to meet the dynamic design of the supply chain both for customers as well as operators within India Post.
